## Today's Release of YWSTEAM™ Offers Vision and Programmatic Approach Based on Advocacy for STEM Education Equity

**NEW YORK, NY (PRWEB) MARCH 21, 2016**

Today, YWCA of the City of New York released its new publication “Welcome to the YWSTEAMocracy ‘The Future of STEM is Inclusive’” Equity Ideas of Women and Girls in Science, Technology, Engineering and Math. The report contains a comprehensive analysis that frames persistent barriers that impede race and gender equity in the STEM field. In the report, research was distilled to outline an approach that uses activism as an important method to enhance the experience of women and girls in a variety of STEM settings.

“Our mission stands for the elimination of racism and the empowerment of women,” said Dr. Danielle Moss Lee, CEO of YWCA of the City of New York. “This has emboldened us to offer a set of equity ideas that will disrupt the status quo and tackle institutional barriers that impact race and gender equity in STEM programs,” she said.

Although in recent years women have advanced in both education and the workforce, the underrepresentation of women in STEM careers and programs –particularly those from marginalized communities persists. For example, women have held less than 25% of STEM jobs in the past decade and specifically, according to the Congressional Joint Economic Committee, women currently only make up 14% of engineers.

To improve the experiences of women and girls and other underrepresented groups in the STEM field, the YWSTEAM™ model seeks to embed 6 core principles in curriculum development, teaching

strategies, classroom environment and the general ethos of institutions. The principles that make up the YW equity approach include:

1. Hands-on/real world applications;
2. Intentional cultivation of science identity;
3. Explicit gender- and race-inclusive practices;
4. Community building and near-peer mentoring;
5. Leadership development;
6. Social justice awareness.

“It is our hope that YWSTEAMocracy will not only empower young women to pursue and persist in rewarding STEM careers, but also raise cultural and institutional awareness about the urgency of making STEM more equitable,” Dr. Lee added.
